STATEMENT OF HUMAN AND ANIMAL RIGHTS
Australasian Orthodontic Journal

For research studies using human or animal subjects, the trial’s design, conduct and reporting of results must conform to Good Clinical Practice guidelines (such as the Good Clinical Practice in Food and Drug Administration (FDA)-Regulated Clinical Trials (USA) or the Medical Research Council Guidelines for Good Clinical Practice in Clinical Trials (UK)) and/or to the World Medical Association (WMA) Declaration of Helsinki.

All research reports that are submitted for consideration of publication in the Australasian Orthodontic Journal (AOJ) must include statement(s) of proof that the appropriate approvals were obtained from the relevant authority or research ethics committee. Any manuscript describing a study that used human subjects must include a statement that affirms the experiments were performed with prior informed consent (written or verbal, as appropriate) from each participant.

All personal information must be anonymised prior to publication, unless a record of explicit consent from the involved patient(s) has been provided. Any manuscript describing a study that used animal subjects must include a statement in the Materials and Methods section (or text describing the experimental procedures) that affirms all appropriate measures were taken to minimise pain or discomfort, and details of the animals’ care should be provided.

_Humans:_ When reporting experiments on human subjects, authors should indicate whether the procedures followed were in accordance with the ethical standards of the responsible committee on human experimentation (institutional and national) and with the Helsinki Declaration of 1975, as revised in 2008. If doubt exists whether the research was conducted in accordance with the Helsinki Declaration, the authors must explain the rationale for their approach and demonstrate that the institutional review body explicitly approved the doubtful aspects of the study.

_Animals:_ When reporting experiments on animals, authors should indicate whether the institutional and national guide for the care and use of laboratory animals was followed.
