On Our Cover

The International Society of Blood Transfusion Working Party on Rare Donors consists of members from those countries around the world with rare donor programs. These members work diligently to provide rare blood to their own patients in need as well as to those in other countries when requested. Each member’s donors who are negative for high-prevalence antigens are listed by phenotype on the World Health Organization International Rare Donor Panel. Providing rare blood is a collaborative worldwide effort. The cover depicts the flags of those member countries that contributed articles to Immunohematology.
